

BDM Capstone Project | IIT Madras

This repository contains my **end-to-end research-driven capstone project** completed as part of the **Business Data Management (BDM) program at IIT Madras**. The project follows a complete research lifecycle—from problem formulation and literature grounding to data-driven experimentation, evaluation, and final insights—bridging **theoretical research thinking with practical implementation**.

The work demonstrates my ability to:

- Frame real-world problems in a **research-oriented manner**
- Design structured **data-driven methodologies**
- Perform **systematic analysis and validation**
- Translate findings into **actionable insights and decisions**

This capstone is my **primary research-based practical project**, and it reflects my approach to applied research: combining **rigor, experimentation, and real-world relevance**. I am sharing this as part of my application journey for **research-focused roles and programs (including Google Research Student Intern 2026)** to showcase my ability to independently execute a complete, structured, and impact-oriented project.

◆ 2. Proposal Stage Description

Project Proposal | Research Problem Formulation & Methodology Design

This folder contains the **proposal stage** of my BDM Capstone Project at **IIT Madras**, where I define the **problem statement, objectives, motivation, and planned methodology** for the research.

The proposal focuses on:

- Identifying a **meaningful, real-world, data-driven problem**
- Structuring it into a **clear research question**
- Designing a **systematic approach** for data collection, analysis, and evaluation

- Laying the foundation for a **scalable and reproducible study**

This stage highlights my ability to think in a **research-oriented, structured, and hypothesis-driven manner**, which is essential for applied research and industry research internships.

◆ 3. Mid-Term Stage Description

Mid-Term Submission | Data Exploration, Method Refinement & Early Results

This folder contains the **mid-term progress** of my BDM Capstone Project at **IIT Madras**, focusing on **implementation, exploratory analysis, and methodological refinement**.

At this stage, the project demonstrates:

- Transition from **theoretical plan to practical execution**
- Initial **data processing, exploration, and validation**
- Refinement of **models/approaches based on empirical findings**
- Early insights that guide the **final direction of the research**

This phase reflects my ability to **iterate, adapt, and improve a research pipeline** based on evidence—an important skill in both academic and industrial research environments.

◆ 4. Final Stage Description

Final Submission | Complete Pipeline, Results & Research Insights

This folder contains the **final version** of my BDM Capstone Project at **IIT Madras**, presenting the **complete research workflow** from problem formulation to final results and conclusions.

The final submission includes:

- A **fully implemented data-driven pipeline**
- Detailed **analysis, evaluation, and interpretation of results**

- Clear **justification of design choices and methodology**
- Practical **insights derived from the study**

This stage represents the culmination of a **research-oriented, end-to-end applied project**, showcasing my ability to independently execute, evaluate, and communicate a complete data/research workflow—skills directly relevant for **research internships and applied research roles**.
